OPERATOR	MONICA JONES
STORE	REGENT STREET

LiveStore integrates with existing CCTV and DVR installations alongside the EPOS to deliver a unique loss prevention solution exploiting all its real-time capabilities. LiveStore identifies anomalous, potentially suspicious or out-of-policy transactions as they occur.

What sets the LiveStore solution apart is its ability to capture and package related video and other contextual information around a transaction event in real-time for access remotely anywhere, at any time. Physically see the transactions you want to see in your reporting dashboard in the most cost effective and timely manner.

The powerful LiveStore policy engine forensically filters transactions, patterns of transactions or other events in-store to provide an irrefutable audit trail of user behaviour, paramount in determining retail shrinkage.

Not to be confused with EPOS and video overlay or synchronisation, LiveStore turns your existing security hardware and IT into a truly smart system. Don't waste time trawling through hours of video on-site or travelling to outlets where you think you have a problem, let LiveStore send out notifications with video attachments around the parameters you have already set.

LiveStore is highly efficient in its use of bandwidth so there is no need to upgrade store networks. Return on Investment is rapid and through integration with an existing physical security estate LiveStore provides an added return on the investment already made in your in-store CCTV.

*'Fraudulent behavior can be contagious ... don't waste time unnecessarily in identifying and dealing with it'*
