

Live Performance Monitoring

The timely provision of relevant information underlies the LiveStore solution, delivered to your desktop, laptop, tablet or mobile in simple to use reporting dashboards.

Why wait until the close of business or end of week to understand how your business is performing? With no need to upgrade your POS hardware and software or in-store networks and external connectivity, LiveStore seamlessly integrates to unlock the inherent potential of your existing retail infrastructure to provide the right information when you need it most.

Monitor sales and turnover in real-time nationally, regionally or store by store. Track performance against KPI's minute-by-minute or follow the effectiveness of promotions against marketing spend.

But don't be over faced by data! LiveStore lets you decide what you want to see and when you want to see it. The LiveStore policy engine lets you set the thresholds and can be configured to send out instant alerts via email or text guaranteed to get your attention. Equally, LiveStore collects all POS data and activity for future reference and mining, so you have the flexibility of combining live need- to-know performance activity with more considered traditional reporting.

'You've already invested in your store IT. LiveStore makes it work smarter'
